

毫米波通感实时感知与预警算法方案

I. 系统模型

A. 发射模型 发射信号

$$\tilde{\mathbf{x}}(t) \triangleq \sum_{i=0}^{N_s-1} \sum_{l=0}^{L-1} \mathbf{x}_i[l] e^{j2\pi i \Delta f t} \text{rect}\left(\frac{t-lT}{T}\right), \quad (1)$$

参数含义

Index	Total	Meaning
i	N_s	子载波数
l	L	快拍数 (frame length)
N_{tx}		发射天线数
N_{rx}		接收天线数

其中

$$\mathbf{x}_i[l] = \mathbf{W}_i \mathbf{s}_i[l] \in \mathbb{C}^{N_{tx} \times 1} \quad (2)$$

B. 通信模型

$$y_{i,k}[l] \triangleq \mathbf{h}_{i,k}^H \mathbf{x}_i[l] + z_{i,k}[l], \quad (3)$$

C. 感知模型

$$\tilde{\mathbf{y}}(t) = \sum_{q=1}^Q \beta_q \mathbf{b}(\phi_q, \psi_q) \mathbf{a}^H(\phi_q, \psi_q) \tilde{\mathbf{x}}\left(t - \frac{2R_q}{c}\right) e^{j2\pi f_{D,q} t} + \tilde{\mathbf{z}}(t), \quad (4)$$

其中

$$\mathbf{b}(\phi_q, \psi_q) = \left[1, \dots, e^{-j\frac{2\pi}{\lambda_c}((N_{rx,x}-1)d_{rx,x} \sin \psi_q \cos \phi_q + (N_{rx,y}-1)d_{rx,y} \sin \psi_q \sin \phi_q)}\right]^T \quad (5)$$

$$\mathbf{a}(\phi_q, \psi_q) = \left[1, \dots, e^{j\frac{2\pi}{\lambda_c}((N_{tx,x}-1)d_{tx,x} \sin \psi_q \cos \phi_q + (N_{tx,y}-1)d_{tx,y} \sin \psi_q \sin \phi_q)}\right]^T \quad (6)$$

采样后做 DFT 得到

$$\mathbf{y}_i[l] = \sum_{q=1}^Q \beta_q \mathbf{b}(\phi_q, \psi_q) \mathbf{a}^H(\phi_q, \psi_q) \mathbf{x}_i[l] e^{-j4\pi i \Delta f R_q/c} e^{j4\pi l T v_q f_c/c} + \mathbf{z}_i[l] \quad (7)$$

$$= \sum_{q=1}^Q \beta_q \mathbf{b}(\phi_q, \psi_q) \mathbf{a}^H(\phi_q, \psi_q) \mathbf{x}_i[l] e^{j i \omega_r(R_q)} e^{j l \omega_v(v_q)} + \mathbf{z}_i[l] \quad (8)$$

其中

$$\omega_r(R_q) = -4\pi \Delta f R_q/c \quad (9)$$

$$\omega_v(v_q) = 4\pi T v_q f_c/c \quad (10)$$

考虑共址的自收自发

$$\mathbf{y}_i[l] = \sum_{q=1}^Q \beta_q \mathbf{b}(\phi_q, \psi_q) \mathbf{a}^H(\phi_q, \psi_q) \mathbf{x}_i[l] e^{j i \omega_r(R_q)} e^{j l \omega_v(v_q)} + \sqrt{\rho_{\text{SI}}} \mathbf{H}_{\text{SI}}[i] \mathbf{x}_i[l] + \mathbf{z}_i[l] \quad (11)$$

其中

$$\mathbf{H}_{\text{SI}}[i] = \sqrt{\frac{\kappa_{\text{SI}}}{\kappa_{\text{SI}} + 1}} \mathbf{H}_{\text{SI}}^{\text{LoS}}[i] + \sqrt{\frac{1}{\kappa_{\text{SI}} + 1}} \mathbf{H}_{\text{SI}}^{\text{NLoS}}[i]. \quad (12)$$
